Design excellence, high quality, and modern architecture

Flavio Lombardo was born in 1973 in Saluzzo, Italy and graduated at the Faculty of Architecture, Turin Polytechnic in 1998, where he was licensed to practice architecture. He continued his studies in Dublin where he received a Diploma in Project Management in 2007. After working and teaching for several years in Italy, he moved to Ireland where he worked for seven years with Scott Tallon Walker Architects. Flavio is a member of the Ordine degli Architetti Pianificatori Conservatori e Paesaggisti, the Italian Institute of Architects, and The Royal Institute of the Architect of Ireland ("RIAI").

In 2010 he opened Flavio Lombardo Architects

("FLA") a forward-looking practice committed to design excellence, high quality, and modern architecture. FLA place great importance on the way people use buildings, and how buildings affect our sense of well being. The Practice puts a strong attention on the right use of materials, the qualities of light and the relationship between the project and its setting. FLA regard these issues to be more significant than working in a specific style and wish that each project will be an original understanding of the client, site, brief and budget. Since opening the Practice, FLA have been involved in house extensions and renovations (including protected structures), high-end residential and commercial fit outs and

consultancy work for industry related companies.

FLA are capable of working across a range of sectors and pay attention to client needs and are interested in helping clients develop an insight into a project, its problems and potentials. Ongoing dialogue with the client is encouraged both as a means of understanding their needs, and of increasing their understanding of the design process. The Practice work and co-operate with other consultants, providing support liaison, and co-ordination roles in addition to specialist architectural and interior design services.

FLA are committed to the preservation of the

environment through the promotion of sustainable design in its broadest sense. FLA have knowledge in Passive House design principles and energy efficient buildings.

Flavio would love to hear about your project; and welcomes all inquiries, regardless of size, scope or budget and offers a consultation with no obligation and free of charge at his office.
